

Stockroom Item Remote

All the work is done from just two screens (issues shown). Enter receipts or issues. No more handwritten notes to decipher. This results in less work for the stockroom staff

Remote Order Entry Fast - Easy - Error Free

Stockroom Item Remote (SIR) simplifies the task of entering department requests for items and receipt of items for the supply room. Now each department can make its own entries, but cannot post them. This means that each request gets checked by someone who can approve, modify or delete each item before posting it.

The Stockroom Item Remote (SIR) program “talks” to the Stockroom Inventory Manager program via a LAN connection. All entries that are entered through SIR appear in the Stockroom Inventory Manager program to be merged into the “Issues” screen of the program. From that point on they are handled the same as issues which have been entered into Stockroom Inventory Manager from the keyboard. Entries coming from SIR can be approved, edited or deleted by the stockroom personnel

QUICK TRANSACTION ENTRY:

- Easy, Menu-Driven Interface
- Quick Item and field look up and help.
- Users can only enter requests for issues. All other Stockroom features are blocked.
- Passwords prevent unauthorized use.
- Use the mouse or keyboard.

WITH A FEW SIMPLE KEYSTROKES...

- Track issues by Item, Department, Charge Number, Date, Etc.
- Locate any item by ID or Description.
- Know which items are available for issue.
- Quickly review your order before sending it in for processing.
- Easily modify existing entries.
- Check your work for errors.

QUICKLY GENERATE RESULTS:

- No more waiting for someone else to enter your requests in the system.
- Catch errors before they reach the stockroom.
- All reports may be printed, viewed on screen or exported.

SPECIFICATIONS:

- Max entries - 2 Billion.
- Data files are dBase III compatible.
